DESCRIPTORS: *Photographic emulsions, Processing, *Silver, Catalysis, *Silver compounds, Complex compounds, Reduction, Oxidation, Diffusion.

Photographic emulsions were developed for different lengths of time and then fixed. Silver was liberated from soluble citrate complexes on the silver threads formed by a second development. Trans. of Photographische] Korr[espondenz] (Austria) 1959, v. 95, no. 10, p. 165-171.

An interpretation was attempted of the image reversal effect occurring after exposure to light during fixation development of photographic emulsion, and an investigation was carried out on (1) the influence of the fixing agent and its concentration, (2) the duration and type of pretreatment, (3) the intensity and duration of secondary exposure; and (4) the effect of thickness of the emulsion coating. The procedure included pre-exposure, pretreatment, intermediate bath, secondary exposure with subsequent treatment and the substitution of separate development and fixation for combined fixation and development. Reversal was produced by alternating pure chemical development with fixation, in (Materials--Photographic, TT, v. 5, no. 5) (over)
